TABLE 1—ACUTE WATER QUALITY CRITERIA FOR PROTECTION OF AQUATIC LIFE IN AMBIENT WATER

EPA recommends that metals criteria be expressed as dissolved concentrations (see appendix A, I.A.4 for more information regarding metals criteria).

(a)

Chemical	CMC (µg/L)	Conversion factor (CF)
Arsenic (III)	a,b 339.8	1.000
Chromium (VI)	a,b 16.02	0.982
Cyanide	c 22	n/a
Dieldrin	d 0.24	n/a
Endrin	d 0.086	n/a
Lindane	d 0.95	n/a
Mercury (II)	a,b 1.694	0.85
Parathion	d 0.065	n/a

^a CMC=CMC^{tr}.
^b CMC^d=(CMC^{tr}) CF. The CMC^d shall be rounded to two significant digits.
^c CMC should be considered free cyanide as CN.
^d CMC=CMCⁱ.

Notes:
The term "n/a" means not applicable.
CMC is Criterion Maximum Concentration.
CMC^{tr} is the CMC expressed as total recoverable.
CMC^d is the CMC expressed as a dissolved concentration.
CMCⁱ is the CMC expressed as a total concentration.

(b)

Chemical	m _A	b _A	Conversion factor (CF)
Cadmium a,b	1.128	−3.6867	0.85
Chromium (III) a,b	0.819	+3.7256	0.316
Copper a,b	0.9422	−1.700	0.960
Nickel a,b	0.846	+2.255	0.998
Pentachlorophenol ^c	1.005	−4.869	n/a
Zinc a,b	0.8473	+0.884	0.978

^a CMC^{tr}=exp {m_A [ln (hardness)]+b_A}.
^b CMC^d=(CMC^{tr}) CF. The CMC^d shall be rounded to two significant digits.
^c CMCⁱ=exp m_A {[pH]+b_A}. The CMCⁱ shall be rounded to two significant digits.

Notes:
The term "exp" represents the base e exponential function.
The term "n/a" means not applicable.
CMC is Criterion Maximum Concentration.
CMC^{tr} is the CMC expressed as total recoverable.
CMC^d is the CMC expressed as a dissolved concentration.
CMCⁱ is the CMC expressed as a total concentration.

APPENDIX A TO PART 132—GREAT LAKES WATER QUALITY INITIATIVE METH- ODOLOGIES FOR DEVELOPMENT OF AQUATIC LIFE CRITERIA AND VAL- UES

METHODOLOGY FOR DERIVING AQUATIC LIFE CRITERIA: TIER I

Great Lakes States and Tribes shall adopt provisions consistent with (as protective as) this appendix.

1. Definitions

A. *Material of Concern.* When defining the material of concern the following should be considered:

1. Each separate chemical that does not ionize substantially in most natural bodies of water should usually be considered a separate material, except possibly for structurally similar organic compounds that only exist in large quantities as commercial mixtures of the various compounds and apparently have similar biological, chemical, physical, and toxicological properties.

2. For chemicals that ionize substantially in most natural bodies of water (e.g., some phenols and organic acids, some salts of phenols and organic acids, and most inorganic salts and coordination complexes of metals and metalloid), all forms that would be in chemical equilibrium should usually be considered one material. Each different oxidation state of a metal and each different non-ionizable covalently bonded organometallic compound should usually be considered a separate material.

3. The definition of the material of concern should include an operational analytical component. Identification of a material simply as "sodium," for example, implies "total sodium," but leaves room for doubt. If "total" is meant, it must be explicitly stated. Even "total" has different operational definitions, some of which do not necessarily measure "all that is there" in all samples. Thus, it is also necessary to reference or describe the analytical method that is intended. The selection of the operational analytical component should take into account the analytical and environmental chemistry of the material and various practical considerations, such as labor and equipment requirements, and whether the method would require measurement in the field or would
